

# Science

On Monday, we had an exciting visit from the Science Dude that really kicked off our term with a bang!

Even though we were a bit tired after the half-term break, the Science Dude quickly got us all buzzing with energy during his thirty-minute demonstration. There was lots of cheering and laughter as he showcased some amazing science tricks. One of the standout moments was when he managed to stick a knitting needle through a balloon without it popping! The children were absolutely astonished, especially when he pulled the needle out, and the balloon didn't deflate!

We then dove into learning about air pressure. Lee and Ivy had a fun competition to see how much air they could blow into a big balloon. They gave it their all, but the Science Dude won decisively, as you can see in the photo! He explained that this is called the Bernoulli's principle, which really intrigued the children.

It was a fantastic morning filled with fun and learning, and the children left with big smiles on their faces. I encourage you to chat with your child about the things they learned—it's a great way to keep that excitement for science going!
